Senior UX/UI Designer

Locations: New York, New York
Categories: Digital Commerce Categories: Technology

Job Description

About American Express GIM

American Express Global information management team is dedicated to helping drive the future of the business by building products and platforms that are composed of strong decision science, exemplary user experience and our closed loop data within a secure and safe environment. We are headquartered in New York City and strongly believe in driving the success of the people we hire.

The Role

Looking for a talented designer to work closely with product managers, engineers, and other designers to create best in class data tools including products that leverage big data. Seamless experience is the key to making something usable vs. not and we want a designer that feels passionate about the UX space and can create beautiful experiences to help our users understand data. Collaboration is key to our success, which means the lines between disciplines becomes blurred, and the impact of design is huge. We encourage a sense of autonomy and expect designers to be able to think critically and act as product leaders. That means being able to see between the lines, give and take feedback well, and actively research concepts that may drive a new way of thinking.

The ideal candidate has an eye for UX, but can move effortlessly between user experience design and visual design. The experiences you create will have a major impact on the entire organization and how customers interact with big data.

Qualifications

Who are you?

- A Designer with 4+ years of experience in the digital space
- Ability to mentor/lead other designers if needed
- You have conceived and iterated product features based on data, analytics, and strategy
- Experience building products with multidisciplinary teams
- Capable of balancing user and business needs
- Experience in creating UI specs and wireframes, and ability to articulate needs, issues and solutions to a diverse audience.
- Deep product experience demonstrated through a portfolio of multiple case studies (examples of data visualization projects/products a plus)
- You are collaborative and aim to solve the problems through design while keeping sight of getting the best visual experience
- Understand you are part of a team. Give and be ready to receive constructive design feedback with fellow teammates

- HTML and CSS knowledge, current on latest responsive design techniques a plus
- You have experience designing native mobile applications (iOS, Android)
- Bring UI and UX best practices. Be an advocate for quality, beautiful lasting designs. Strive for excellence.
- You have excellent oral and written communication skills. You are able to verbally and visually tell stories and keep people engaged.
- You are looking to bring and educate others on design thinking within a larger corporation and understand that not everyone understands the importance of it
